

Intercultural Collaboration in Hybrid Learning Spaces

BREAKING CULTURAL AND SPATIAL BOUNDARIES WITH TECH

Work Package 7.4
the hybrid
classroom team

The rise of hybrid active learning classrooms is transforming education and showcasing the power of intercultural collaboration.

In CHARM, we developed a **unique model of classrooms that are connected across borders**. They are used for **international teaching and learning**, as in the Master Global Challenges for Sustainability, where classes take place **synchronously** in several countries, connected by tech.

Discover how we break cultural and spatial barriers thanks to this project!

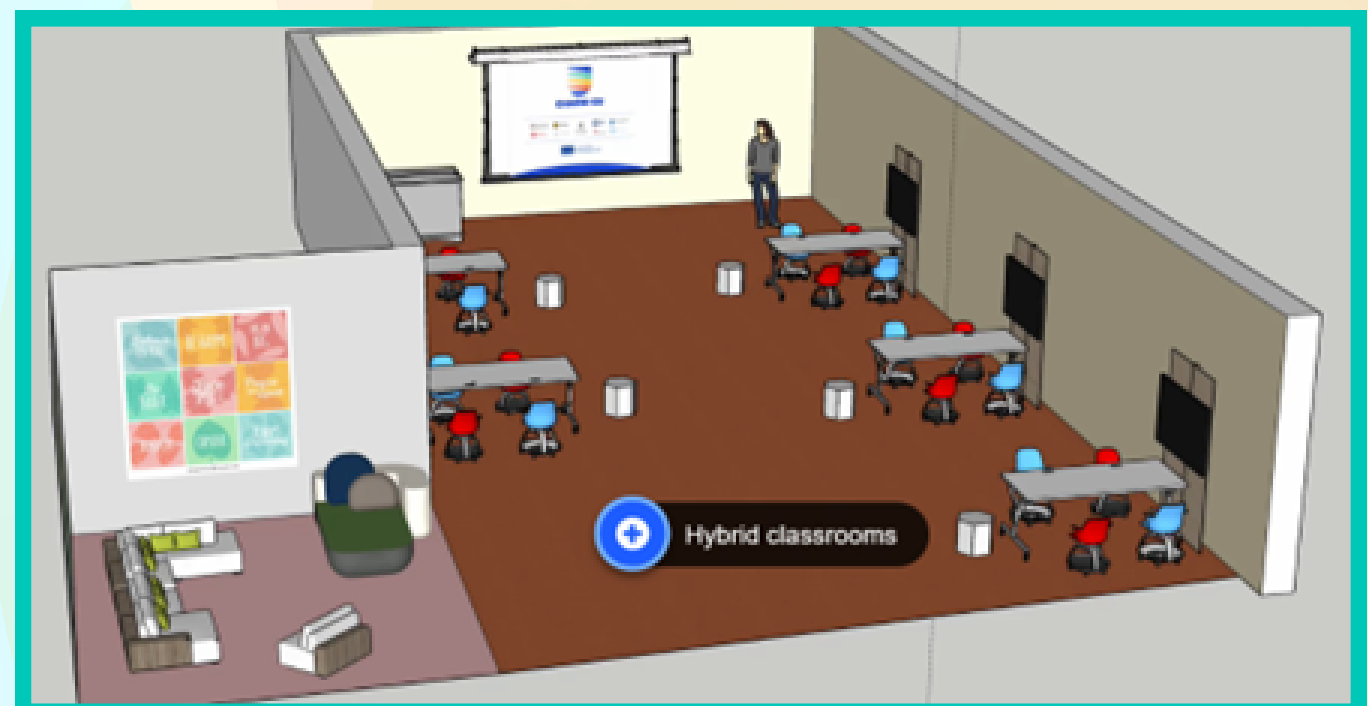

Cross-Cultural Vision

This project emerged from the **shared vision of nine European universities**, each contributing unique cultural insights and expertise. Meeting as a small but diverse group, we constantly exchanged ideas: **“How do you solve this? What’s your approach?”** Through these conversations, we blended different perspectives into a strong, flexible educational solution that connects our students across borders.

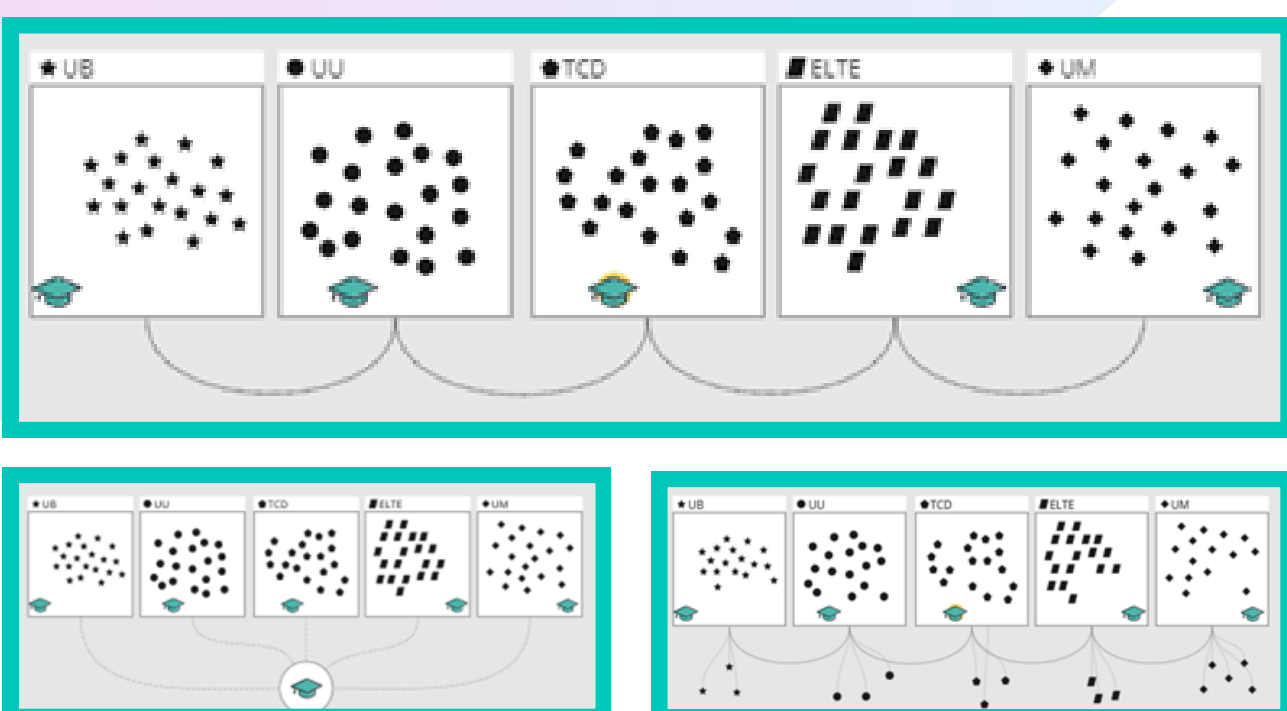

Innovative Hybrid Spaces

Our hybrid classrooms combine cutting-edge tech, like high-resolution cameras and interactive screens, with cozy corners featuring sofas and mascots—thanks to some universities’ human-centered, holistic approach. **“Keep it human, add a plant!”** was a memorable suggestion from those with less focus on high-tech and more on creating a comfortable environment for teaching and learning.

Students collaborating across borders

Through hybrid classrooms, students can engage actively with their fellow students and teachers located at the partner institutions. So-called ‘pods’, work stations for a group of students, have hybrid connection facilities of their own. A teaching assistant at each location makes sure everyone is on board and all runs smoothly. With real-time communication tools, students engage fully, **no matter where they are.**
